

Single Window Service and Information Dissemination in Indonesia

February 11, 2015

Bangalore, India

Ratnawati Muyanto

ILO Country Office Jakarta

Outline

-) SWS as dissemination information center
-) Current Dissemination Information Methods
 - i) Indonesian community structure
- v) Moving towards community empowerment for disseminating information

Indonesia

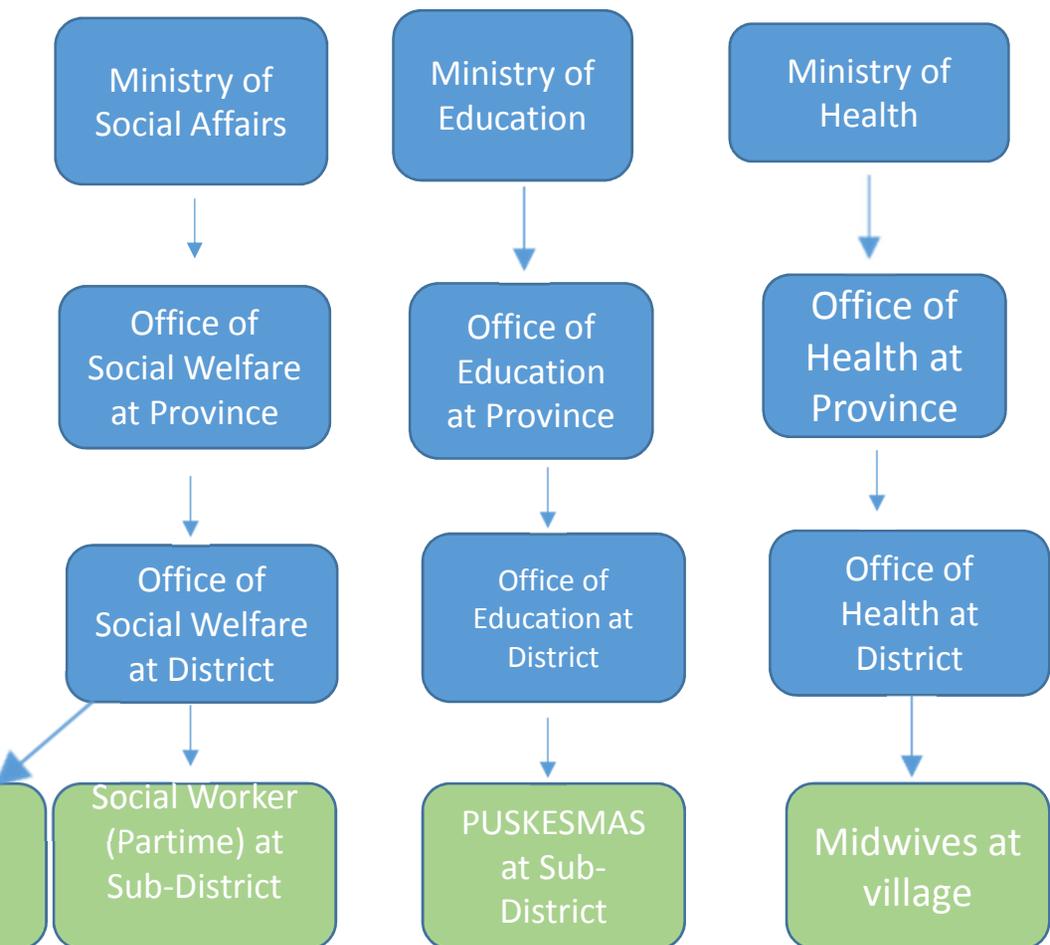

SWS is a facility to disseminate programme information to the beneficiaries

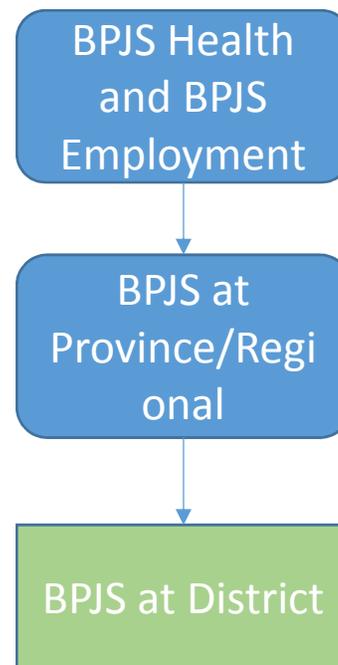

Current Institutional Arrangement for Social Protection Programmes

Social Assistance Programme Information

Social Security Provider

Is it an effective way to disseminate programme information?

Social worker at Sub-District level tends to ignore Village Administration role → mismatch information could happen

Only the beneficiaries know the targeted programme → others may not be aware of existing programme

Since universal health insurance has been implemented in January 1, 2014, none of people (based on random interviews conducted afterwards in Malang District) understands what it is despite the public announcement through national TV on a daily basis.

Indonesian Community Structure

NEIGHBORHOOD SERVICE (RT)
(ENDORSEMENT LETTER 1 TO GET NON-CONTRIBUTORY SCHEME)

ONE HEAD OF RT

COMMUNITY SERVICE (RW)
(ENDORSEMENT LETTER 2 TO GET NON-CONTRIBUTORY SCHEME)

ONE HEAD OF RW and ONE SECRETARY

VILLAGE

SMALL ADM OFFICE
(4-5 STAFFS)

POKJANAL POSYANDU

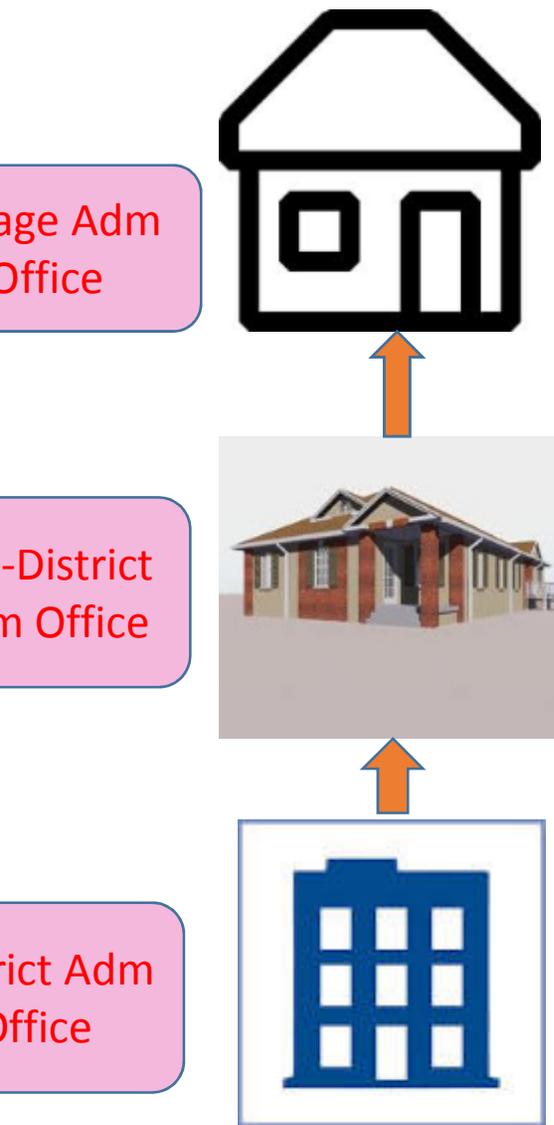

(COORDINATOR → MIDWIFE) (INTEGRATIVE HEALTH SERVICE DELIVERY POINT – MATERNAL CHECKING, INFANT NUTRITION MONITORING, etc). Its operational cost is shared by the have in community and local public

There are two types of villages which are DESA (Head of Village is appointed, more traditional) and KELURAHAN (Head of Kelurahan is appointed, administration function)

Midwife is technical field officer of Health Office, her operational job is under PUSKESMAS coordination

Moving towards local government and community empowerment for disseminating information

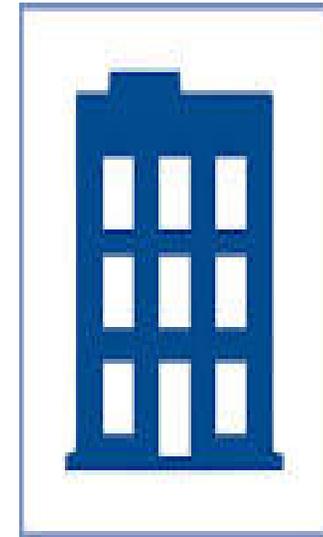

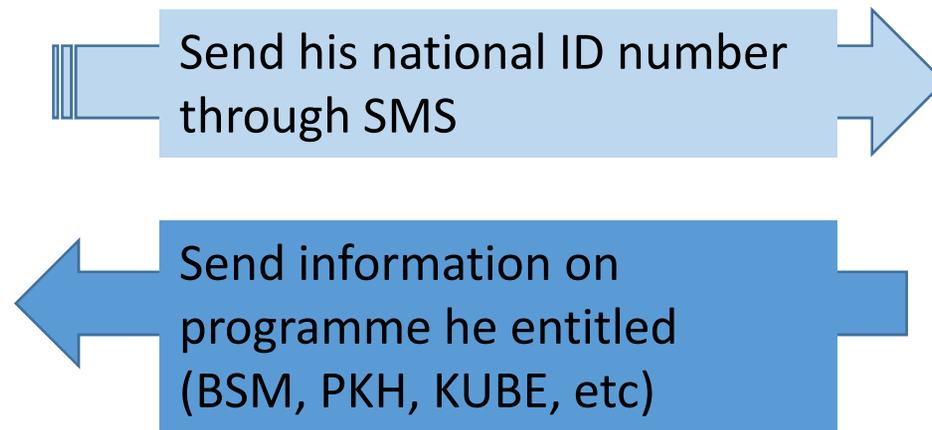

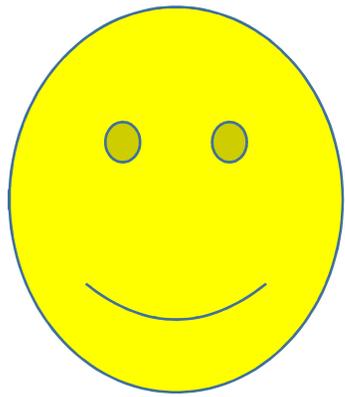

- Disseminate programmes through tools such as pamphlet, leaflet, announcement board at public market
- Coordinate the community coordinator (RT, RW, Posyandu coordinator) to inform programme to their member

- Identify existing programmes at Sub-District
- Receive dissemination tools from District
- Cooperate with religious scholar for further dissemination steps
- Provide dissemination tools at Puskesmas (health center), Post Office, School

- Coordinate with technical offices to compile their related programmes on standardized form (by PPID – officer for documenting and collecting programme information)
- Compile existing programmes
- Design the dissemination tools and then deliver to Sub-District Office
- Develop cooperation with local TV and newspaper on registration procedure

Disseminating Information through Management Information System Application

People only receive such a short notification through SMS so that they may not understand BUT they may go to SWS and to contact SWS call center for further programme information. MIS application may not only inform people directly but also increase people's awareness of existing social protection programmes.

Situation at Sub-District Adm Office for Civil Registration

THANK YOU
